54X MAX CD-ROM Drive

The Mitsumi 54x Max CD-ROM drive uses state of the art CAV technology to achieve high speed data transmission speeds of 3540 KBytes/sec. (23.6x) at disk inner circumference, and 8100 KBytes/sec. (54x) at disk outer circumference. Featuring fast 75ms access time and Ultra DMA and Multi-Block transfer support, the advanced IDE interface utilizes unused data channels normally used by the hard disk drive. The double dustproof system insures long life and the convenient electric from load tray means easy horizontal or vertical mounting. With the Mitsumi 54x Max CD-ROM drive you have today's fastest performance for multimedia, games, digital photos and multisession CDs including CD-R(W) multi-read capability.

Mitsumi makes and ships millions of reliable PC peripheral products every year around the world. In fact, Mitsumi is the world's largest manufacturer of PC peripherals including keyboards, mice, optical drives and floppy disk drives. We keep our quality up while helping to keep your costs down.
